Bio

The first Canadian woman and neurologist to fly in space, Dr. Roberta Bondar is globally recognized for her pioneering contributions to space medicine research, fine art photography, and environment education. She expanded the horizons of millions when she joined the space shuttle Discovery for its 1992 mission, where she conducted experiments for 18 countries in the International Microgravity Laboratory, a precursor to the International Space Station. Her highly motivational talks — punctuated by her stunning photographs — focus on change, social responsibility, and our environment. [morelink]
